DEPARTMENTAL ACTIVITY REPORT

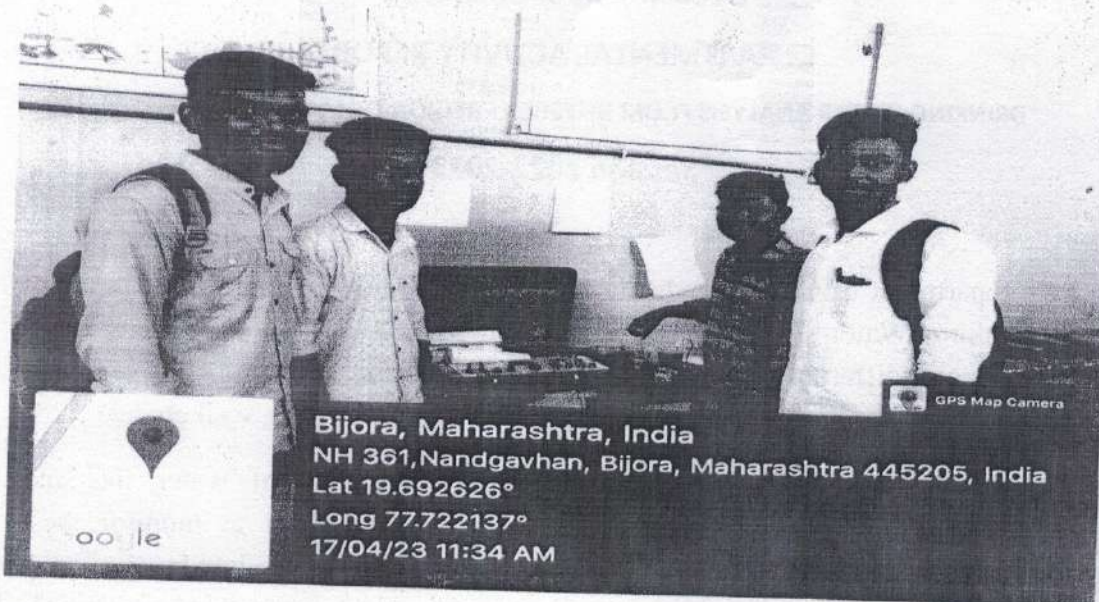

"DRINKING WATER ANALYSIS FROM DIFFERENT REGION OF MAHAGAON TEHASIL"

Session 2022-2023

Department of Chemistry has organized the activity for students & society, like Drinking Water. Accordingly department of chemistry analyzed the water samples from different regions / villages of Mahagaon tehsil. Samples were collected by the students having different sources like Bore well, well etc.

In this analysis we analyzed different parameters of water like pH, Conductivity, TDS, Total hardness, Salinity .It is important to monitor these parameters for several reasons. When a water source has high or low level of these parameters, it is likely that there is other harmful contaminant in water. Like TDS & pH are also easy to measure and if something is happening to water such as pollution, chances are both TDS & pH level change. So keeping track of those changes can act as an early warning signal that something is happening to the water and that water is hazardous for human health.

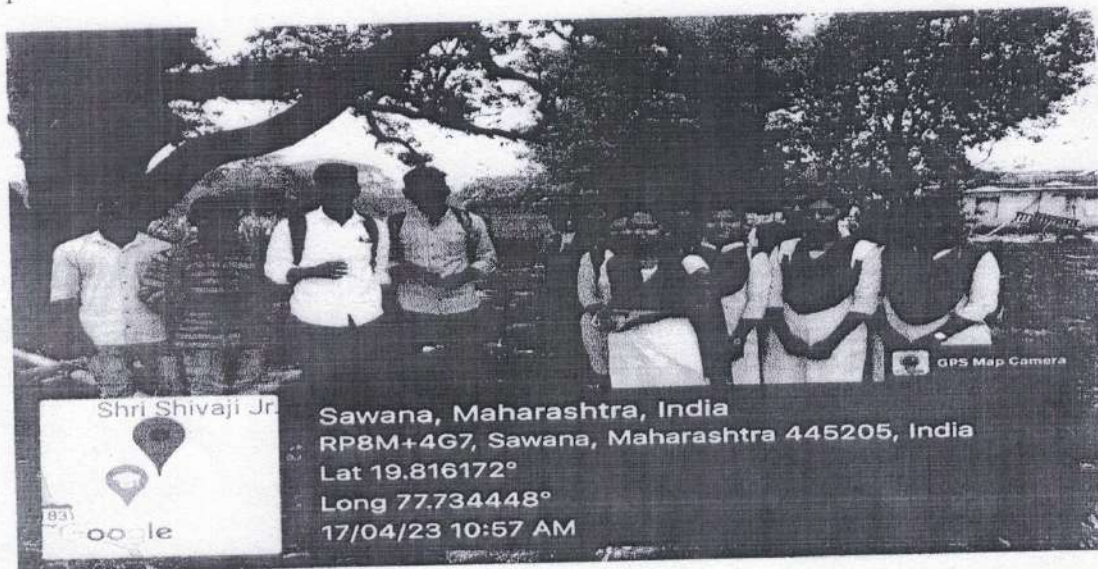

The main purpose behind this activity was to make aware the students and society about drinking water. It is because important to monitor these parameters, So that if they change action can take immediately.

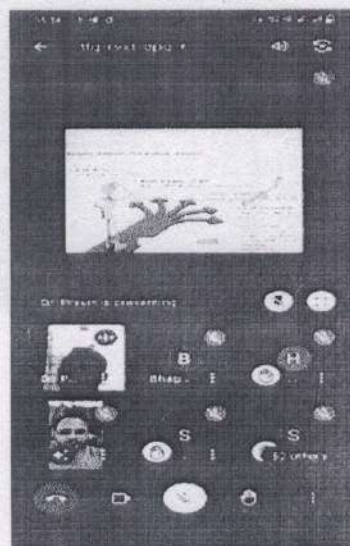

From the analyzed parameters we came to know that, the given samples are permissible for drinking purpose but some samples required purification process.

Report on Career opportunity in chemical and basic science program

Government organizations like Council of Scientific and Industrial Research (CSIR), Indian Space Research Organisation (ISRO) and Defence Research and Development Organization (DRDO), and Public Sector Undertakings (PSUs) like Oil and Natural Gas Corporation (ONGC), Bharat Heavy Electricals Ltd. (BHEL), Bharat Electronics Limited (BEL) and Power Grid, have a great demand for graduates in basic sciences and offer a competitive pay at par with industry standards. A career as a scientist in government institutes can be a great way to balance one's thirst for research with an excellent career.

Our college and department of chemistry organised program on topic Career opportunity in chemical and basic science. The speaker was Dr. Pravin R. Kawle and he aware the students about opportunity in chemical science with other competitive exam like banking sector. The program is conducted on Google meet online mode nearly 62 students were present.

“SOIL ANALYSIS”

Session 2022-2023

A soil sample can be analyzed to determine its composition, nutrients levels and characteristics such as the P^H balance. Soil testing usually carried out as a part of a programme consisting of four phase 1) Soil sampling 2) Sample analysis 3) Data interpretation and 4) Soil management recommendations. Soil tests can help to determine soil fertility levels and identify nutrient deficiencies, potential toxicities and trace minerals. They are also important for monitoring the stages of land degradation, acting as a first step in defense by regularly gathering information on which to base land management and fertilizer decision over time, Our college is in very rural area most of the students belongs from farmer background, so knowledge of soil analysis definitely helpful for monitoring the stages of land degradation and soil fertility to students.

Department of chemistry conducted the soil analysis activity in the month of march 2023. Near about 11 samples were analyzed and parameters analyzed are N,P,K,pH. In most of the samples pH, carbon, potassium are in reference range, but in most of the samples the parameters i.e. N & P are found to be low than that of reference range, in view of this , we provide broucher to the students / farmer for the better improvement of N & P in the soil.
